

Upward Bound **Math & Science** PROGRAM

imagine... believe... achieve

The Upward Bound Math & Science Program at BCCC strives to elevate students who have an interest in careers in science, technology, health, engineering, and math through intensive instruction and project-based learning.

We prepare students for college, increase their academic abilities in high school, and provide an environment of values and attitudes conducive to productive citizenship and lifelong learning.

Each year, the UBMS program at BCCC serves approximately 60 students recruited from specially targeted Baltimore City high schools. Eligible students live in households where parents or guardians did not complete a four-year college or university degree.

At the heart of the program is academic study in science, math, engineering, and biotechnology. Additional course work in English composition, literature, computer literacy, study skills and leadership training supplement the academic services. Individual and group counseling on personal and academic matters and financial aid information is readily available.

BCCC offers one of only four UBMS programs in Maryland, and has the distinction of being the only community college UBMS program in the state.

Qualify to apply

- Students in grades 9-12; Students in the 8th grade may apply for admission but will not be admitted until they receive their final grade report card
- Students who have an interest in science, mathematics, engineering or a related STEM field
- Students who are willing to participate in all aspects of the Upward Bound Math and Science Program
- Students who will be a “first generation” college student

How to apply

There are several ways in which students may apply for our program.

1. Submit the attached interest form
2. Fill out and submit the application at bccc.edu/upwardbound
3. Visit our office in Suite 023K of the Main Building on Liberty Campus

Upward Bound Math & Science PROGRAM

- Academic instruction & tutoring
- Academic advising & mentoring
- Career exploration
- Leadership training
- Project-based research experiences
- College campus visits
- Cultural activities
- College admissions information & application assistance
- Financial aid & scholarship information
- Parent workshops

Success is our path.

I expected to build on what I received in school but in certain classes, ended up learning more in the past six weeks than I did my whole 10th grade year.
